CoinBitco: An All-in-One Solution For All Your Crypto Needs

Despite the recent losses experienced in the cryptocurrency market, these digital assets remain extremely popular among investors. Debthammer reported that there are 295 million crypto users across the globe, with 20% of them originating from the United States. The report also revealed that there were approximately 20,000 cryptocurrency projects at the time and 500 crypto exchange platforms. These numbers can be pretty intimidating if you are a novice cryptocurrency user.

Luckily, CoinBitco is a relatively new cryptocurrency platform that will cater to all your needs when it comes to buying, selling, storing, or even earning interest on your crypto assets.

About CoinBitco

According to its official website, CoinBitco is a highly secure cryptocurrency platform that facilitates a wide range of applications in the crypto space. The platform is owned by Imperator and is at the frontline of "crypto 2.0," the latest era of crypto distinguished by the same standards of corporate governance, top-notch customer service, and security as required in a traditional banking institution. CoinBitco's primary goal is to provide the world with the most secure all-in-one cryptocurrency platform by fusing crypto-fiat exchange with decentralized peer-to-peer smart device payment.

The Most Hyper-Secure Cryptocurrency Platform on the Market

A unique feature of CoinBitco is that it prioritizes its security measures to ensure its users feel confident while using the platform. It does this by utilizing a hybrid and modular centralized-distributed system that enables it to protect the platform from both external and internal threats. The platform also has an in-built disaster-recovery and comprehensive failover system, in addition to a high-grade security system backed by a highly skilled security team unmatched by any other cryptocurrency platform on the market.

Furthermore, most user assets are stored offline to offer extra crime insurance for online assets. Thanks to its highly flexible and scalable infrastructure, users can enjoy 100,000 authentic and secure transactions per second on the platform. Note that the platform also adheres strictly to the regulations in all the 98+ countries that support it.

A Cryptocurrency Platform Accessible via All Mobile Devices

In addition to being secure and simple to use, CoinBitco strongly emphasizes serving more than 2.5 billion people who are underrepresented in the financial systems. Nowadays, most individuals own a mobile device. Thus any iOS or Android phone can use the digital platform, the CoinBitco App.

As a result, we empower everyone, whether they are small businesses, medium-sized organizations, or individuals. CoinBitco operates in more than 100 nations and has supported at least $400 million in traded volume. It is also worth noting that the platforms have more than 34 million users and support over 65 digital currencies. Furthermore, CoinBitco's support staff is accessible to users via email around-the-clock because the platform prioritizes establishing trusting relationships with its users.

Enjoy Multiple Trading Options When Depositing and Withdrawing Crypto and Fiat Money

Based on your demands and level of competence, CoinBitco users can access various trading options, including spot trading, perpetual contracts, futures, over-the-counter trading, and margin trading. Thus, users on the platform can enjoy trading on multiple fronts.

Earn Interest by Owning and Staking Various Cryptocurrencies

If you are conversant with the cryptocurrency space, you have probably heard of stablecoins. These refer to digital currencies linked to fiat currency to lower or stabilize the volatile nature of the cryptocurrency market while maintaining bitcoin's relevance and convenience. Through CoinBitco Earn, CoinBitco allows its users to hold and stake Ethereum 2.0 and Pancakeswap to earn certain percentage rewards. However, the site will soon add more stablecoins to its CoinBitco Earn portfolio.

A Unique and Safe DApp Crypto Wallet

Another unique feature of CoinBitco is its innovative DApp wallet that aids in keeping their crypto assets safe as they use the platform. The CoinBitco DApp wallet is a non-custodial wallet that encrypts private keys into a mnemonic phrase only known to the account holder to ascertain maximum security and privacy. In addition to multi-coin functionality, the wallet provides native support for Ethereum, Bitcoin, and ERC20 tokens. It is also compatible with Android, iOS, Linux, and Windows and allows for the seamless integration of digital currencies and other currencies.

Additionally, the wallet has a built-in QR code scanner that allows users to quickly exchange cryptocurrencies with just one click that automatically scans wallet addresses. Additionally, it offers a real-time swapping feature that enables wallet users to quickly and easily swap out one cryptocurrency asset for another without any limits or the requirement for an intermediary using fiat money.

Conclusion

CoinBitco is quickly bridging the gap in using cryptocurrencies among users of all skill levels. Users no longer have to move from one platform to another to trade, buy, sell, or stake their digital assets. CoinBitco has proved to be the most secure crypto-native finance platform, and we are eager to see its following developments.
